

GlobalConnect deploys Nevision Virtuoso and VideoIPath for remote production and contribution

Solution used amongst others for HD and 4K/UHD coverage of Danish football league

Oslo, Norway, 19 September 2019 - [Nevion](#), award-winning provider of virtualized media production solutions, has announced today that [GlobalConnect](#) has deployed [Nevion Virtuoso, the software-defined media node](#), and [Nevion VideoIPath, the orchestration and SDN control software](#), for remote production and contribution applications. The leading provider of fiber network, data centers and cloud solutions, is using the solution to serve leading media providers of the Danish football league, Superliga, as well as support the remote production of other sports such as handball.

GlobalConnect required a new solution to replace its existing infrastructure that would include both compressed and uncompressed services with a clear path to an eventual migration to SMPTE ST 2110. Prior to deploying Nevision's solution, GlobalConnect transmitted Superliga feeds using multiple audio, video and network cables from a outdoor cabinet to the OB van where only one 10G fiber connection in OB vans is used today.

The new solution features Nevision carrier-class Virtuoso MIs, which are used to encode and transport HD and 4K/UHD feeds (using JPEG 2000) in real-time from the football arenas. They are also deployed on a total of 4 OB trucks and 2 Mobile Units across the country to provide host feeds for GlobalConnect's customers. Nevision VideoIPath manages and orchestrates the network, ensuring in particular load balancing and uptime.

Anders Kuhn Saaby, CTO at GlobalConnect said: "We have a long-standing relationship with Nevision during which time we've been able to feed feature requests into the products to fit our needs. As an integrated digital infrastructure provider, we have a great interest in the SDI to IP development and Nevision has been instrumental in our first phase of migration to IP."

Hans Hasselbach, Chief Commercial Officer, Nevision, commented: "We have partnered with GlobalConnect since 2012 and have provided a number of solutions in this time, including VideoIPath, where we still expect to introduce more benefits with new features for our multitenant and mobile infrastructure components. We look forward to continuing

to work with GlobalConnect in the future as it transitions to an IP production environment.”

About GlobalConnect

GlobalConnect is a leading tech and telecom company in Northern Europe. The Group provides comprehensive communications solutions from earth to cloud. The solutions are based on GlobalConnect’s own infrastructure consisting of 42,000 km of fiber network and 18,000 sqm of data center.

GlobalConnect has 24,000 B2B customers and covers all sectors - from SMEs to public sector and multinational companies.

About Nevion

As the architect of virtualized media production, Nevion provides media network and broadcast infrastructure solutions to broadcasters, telecommunication service providers, government agencies and other industries. Increasingly based on IP, virtualization and Cloud technology, Nevion’s solutions enable the management, transport and processing of professional-quality video, audio and data – in real time, reliably and securely. From content production to distribution, Nevion solutions are used to power major sporting and live events across the globe. Some of the world’s largest media groups and telecom service providers use Nevion technology, including AT&T, NBC Universal, Sinclair Broadcast Group Inc., NASA, Arqiva, BBC, CCTV, EBU, BT, TDF and Telefonica.
