

Nevision Viewer

The Nevision Viewer provides a safe and secure way to access and control the familiar and intuitive graphical interface for the Virtuoso and other Nevision products.

The Nevision Viewer allows users to access the user interface of Nevision devices, for monitoring or configuring, from a secure application running in any PC (Windows or macOS).

The Nevision Viewer is a highly secure application. Unlike browsers that can be used for both internal and external sources, the Nevision Viewer application is designed to communicate only with Nevision products. It does not provide access to any other resources on the computer or network.

This application is built upon AIR® technology, which was originally developed by Adobe, and is now under continuous development and support by Harman, a Samsung subsidiary. Harman's goal is to expand the usage of AIR to be used by more developers in the coming years on Android, iOS, Windows and macOS.

The Nevision Viewer is distributed and digitally signed by Nevision. The latest bug fixes and security updates are continuously incorporated into every new release.

The latest version is readily available from Nevision support.
