

Nevion's MOXELA steals the show at NAB 2026, winning a TV Tech Best of Show Award

Nevion's cloud-native media processing platform shines in hybrid live production demos featuring SMPTE ST 2110 and MXL workflows

Oslo, Norway, 24 April, 2026 – Nevion, a Sony Group company, today announced the successful debut of [MOXELA, its next generation, software-based media processing platform](#), at the NAB Show 2026 in Las Vegas, earning a TV Tech Best of Show Award and being named a finalist for the NAB Show Awards.

Announced shortly before the show, MOXELA played a central role in a software-defined broadcasting demonstration on the Sony booth that highlighted the ability to run hybrid live production across cloud and on-premises environments. The demo combined Sony's software-only M2L-X switchers with MOXELA handling media transport and processing, and showcased workflows using both SMPTE ST 2110 and Media Exchange Layer (MXL) interfaces.

MOXELA was also featured on the AWS booth, where it demonstrated MXL interoperability with products from other vendors. This showcased the platform's open, standards-based approach and its ability to fit into multi-vendor live production ecosystems.

Throughout the show, MOXELA attracted significant attention from broadcasters, production companies and technology partners looking to modernize live workflows with scalable software and cloud-native deployment models.

"Receiving the TV Tech Best of Show Award for MOXELA at NAB was a real highlight for our team, and it reflects what we heard again and again on the show floor: broadcasters want the freedom to build live workflows in software, scale them when they need to and run them wherever it makes most sense, from on-premises to the cloud," said Cezary Cieslewski, Product Manager, MOXELA at Nevion. "MOXELA is built to deliver that flexibility with high-quality, low-latency media processing and an open, standards-based approach."

About Networked Live

Sony and Nevion's Networked Live is an ecosystem of solutions, products, services, and partners that combines hybrid on-premises and Cloud processing with network connectivity to transform the logistics and economics of high-quality mission critical live production.

It does this by enabling resources (places, people, and processing) to be connected, used, and shared optimally and seamlessly in productions – regardless of their locations. For more information, see: <https://nevision.com/sony-nevision/>

About Nevion

As the architect of virtualized media production, Nevion, a Sony Group Company, provides media network and broadcast infrastructure solutions to broadcasters, telecommunication service providers, government agencies and other industries. Increasingly based on IP, virtualization and Cloud technology, Nevion's solutions enable the management, transport and processing of professional-quality video, audio and data – in real time, reliably and securely. From content production to distribution, Nevion solutions are used to power major sporting and live events across the globe. Some of the world's largest media groups and telecom service providers use Nevion technology, including AT&T, NBC Universal, Sinclair Broadcast Group Inc., NASA, Arqiva, BBC, CCTV, EBU, BT, TDF and Telefonica.
